

Your AI-Native Data Repository.

Ask your data anything, from anywhere — with full source traceability on every answer.

Profonti unifies the systems your team already runs in — CRM, LMS, billing, ticketing, S3 buckets, the spreadsheet someone owns — into a single private repository your operators can talk to in plain language. Every number cites the row it came from. Every term means what your business says it means. Your data never leaves your environment.

Your data stays yours.

Profonti runs in your cluster, on your database, with your data — under a perpetual license. You can't be locked out, forced to migrate, or charged escape fees. Your data is never combined with another customer's, never used to train any model. Privacy is the default, not an upsell tier.

Every answer cites its source.

Click a number and see the exact rows it came from — schema, query, timestamps. No hallucinations. No "where did this come from?" meetings. Audit-grade by construction.

The definitions are yours.

"Active customer" means what your CFO says it means, not what an LLM guesses. Profonti carries your definitions through every answer, every digest, every alert — the same vocabulary across the company.

ONE REPOSITORY, EVERY CHANNEL

Browser	Conversational analysis. Plain-language questions, cited answers, CSV export.
Email	Weekly digest sectioned by goal — the CEO board-meeting artifact. Operator-configured alerts when thresholds change.
Slack / Teams	The same questions, the same citations, in the channels your team already lives in.
Mobile	Field operators see the same answers desktop users see. Installable PWA — no app store.
Slides	Auto-generated PPTX from any question. Monday-board decks build themselves.

HOW AN ENGAGEMENT RUNS

DISCOVERY

Fixed-price. We document your goals, sources, audiences, and the definitions that anchor them. The output is a written engagement document — the traveling definition every later answer references back to.

BUILD

Fixed-price. Your sources sync into your private repository. Goals get their canonical queries. Stakeholders go on the digest list.

RUN

Monthly run-rate. The team that built it is the team that answers your alerts. New sources, new goals, new questions — included in the rate up to a stated cadence.

BUILT FOR OPERATORS WHO DON'T WANT A DASHBOARD PROJECT

You don't need a six-month BI rebuild. You don't need an analyst queue. You need answers your **finance director** can reply to and your **COO** can act on. Profonti is for the company where:

- The CEO has been asking the same three questions for two years and the answer has been different every time.
- "Active customer" means one thing in the CRM, another in the LMS, a third in the deck.
- A franchise owner wants to know how their region compares — and the home office to see the same number.

WHAT YOU GET

- **Private repository** in your cluster, your account — Profonti code on a perpetual license. Yours to run, ours to maintain.
- **Source connectors** for Postgres, MySQL, Snowflake, BigQuery, S3, HubSpot, Salesforce, Stripe, REST APIs, and file drops.
- **Cross-source identity resolution** — one canonical Customer / Franchise / Product across every system.
- **Conversational analysis** with cited answers and per-question CSV export.
- **Alerts + weekly digest** by email, Slack, Teams, or SMS — sectioned by your stated goals.
- **Definition lookup** — your canonical meanings travel with every answer.
- **Mobile PWA + PPTX export** — same answers on every device, every deck.
- **Anomaly detection** — Profonti tells you when the numbers stop looking like they used to.
- **Engineer-on-call** — the team that built your engagement is the team that answers your alert.
